
ANNOMARKET WEB PAGE ANNOTATION BROWSER PLUGIN

User Documentation

PURPOSE OF THE ANNOMARKET WEB PAGE ANNOTATION BROWSER PLUGIN

The AnnoMarket Web Page Annotation Browser Plugin allows the users to easily annotate webpages of their interest using a variety of annotation tools provided by the AnnoMarket platform. The plugin allows the user to process web pages directly from the browser.

PREREQUISITES

In order to use the AnnoMarket Web Page Annotation Browser Plugin, you will need:

- A recent (v.27+) version of the Mozilla Firefox Web Browser. You can download it for free from [Mozilla's website](#).
- An AnnoMarket account with an associated ApiKey in order to authenticate in front of the AnnoMarket system. You can get those at the [annomarket.com](#) website.

Note: You can use the plugin anonymously, but the non-authenticated usage is subject to limitations.

USAGE GUIDE

INSTALLING THE PLUGIN

FROM FILE

- Download the `annomarket-plugin.xpi` file
- Open the file with Mozilla Firefox browser
- You will be asked to confirm that you want to install the plugin. Click *Install Now*.
- You will see an *Installation Successful* confirmation message and the plugin icon appearing in the lower right corner of the browser window (on the Add-ons bar).
- If you do not see the Add-ons bar with the AnnoMarket plugin on it, go to *View >>Toolbars >>Add-on bar* and check the checkbox next to it. This should display the bar on the bottom of the window.

CONFIGURING THE PLUGIN

The first thing you should do after installing the plugin is to configure it. You cannot use the plugin without completing this step.

- Click on the plugin icon on the Add-on toolbar in the lower right corner of the browser window
- Click on the *Settings* button.

- You are prompted to enter your API credentials in order to authenticate against the AnnoMarket system. For a description of how to get the credentials, see **Prerequisites** section.
- Alternatively, you can click the *Use anonymously* button, which will not require you to enter any credentials but will grant you only limited usage of the system. This should be used only for testing the functionality of the system.
- Click *Save* in order to save your configuration and start using the plugin.

Nasa's Robonaut 2 scrubs up for space surgery

By Tom Espiner
Technology reporter, BBC News

Robonaut 2 was built and designed at Nasa's Johnson Space C

It won't panic in an emergency, its hands don't shake little sleep, it won't miss a family after months away from home, and the fact it doesn't even need to breathe.

Nasa's Robonaut 2 has the makings of the perfect space surgeon.

The humanoid has already been posted to the International Space Station, the only problem is its motor skills are somewhat rusty at the moment.

In truth, it can't even walk in zero gravity yet, and perhaps the most impressive physical feat to date has been to catch a floating piece of duct-tape.

But Nasa has high hopes for the new recruit, and techniques developed by a team on the ground could mean the machine will eventually perform life-saving operations on its team-mates.

"The idea is for him to be the best medic, nurse, and physiotherapist," Garami of the Houston Methodist Hospital tells the BBC.

Settings

API Key ID: AMCxxxxxxxxxx ?

API Key Secret: xxxxxxxxxxxxxxxxxxxxxx ?

Use anonymously Delete Save

Note: As the plugin saves your credentials in the browser, you should delete them from the Settings screen after you finish using the system. This is especially important if you are not the only one using the device. If you find out that your credentials have been stolen, you should immediately disable them from the [Api Key management console](#).

USING THE PLUGIN

- Using the Firefox Web Browser, navigate to the webpage you want to process.
- Click on the browser plugin icon on the Add-on toolbar in the lower right corner of the browser window.
- If you have not already set your access credentials, do that by following the steps described in the **Configuring the plugin** section.
- Select a pipeline you want to use for processing. You can see detailed descriptions of the different pipelines on the [AnnoMarket shop](#).

Nasa's Robonaut 2 scrubs up for space surgery

By Tom Espiner
Technology reporter, BBC News

Robonaut 2 was built and designed at Nasa's Johnson Space Center.

It won't panic in an emergency, its hands don't shake, it doesn't need to sleep, it won't miss a family after months away from home, and the fact it doesn't even need to breathe.

Nasa's Robonaut 2 has the makings of the perfect space surgeon.

The humanoid has already been posted to the International Space Station, the only problem is its motor skills are somewhat rusty at the moment.

In truth, it can't even walk in zero gravity yet, and perhaps its most impressive physical feat to date has been to catch a floating pen with its duct-tape.

But Nasa has high hopes for the new recruit, and techniques developed by a team on the ground could mean the machine will eventually perform life-saving operations on its team-mates.

"The idea is for him to be the best medic, nurse, and physicist," says Dr. Garami of the Houston Methodist Hospital tells the BBC.

Process current page

AnnoMarket News Pipeline

Process current page

Settings

- After selecting a pipeline, hit the *Process current page* button in order to send its content to the processing service.
- After several seconds (this depends on the size of the page and the complexity of the pipeline), the annotated content of the webpage is visualized on a separate browser tab with the plugin window displaying the color legend for the different annotation types.

UNINSTALLING THE PLUGIN

- Go to *Tools >> Add-ons*
- Click on the *Remove* button next to the AnnoMarket plugin
- You will see a message *AnnoMarket plugin has been removed.*
